SARS-COV-2 IgG

Negative results do not rule out SARS-CoV-2 infection, particularly in those who have been in contact with the virus. Follow-up testing with a molecular diagnostic should be considered to rule out infection in these individuals. A positive result suggests exposure to SARS-CoV-2 (COVID-19) but does not necessarily indicate immunity. Results from antibody testing should not be used as the sole basis to diagnose or exclude SARS-CoV-2 infection or to inform infection status. False positive results can occur due to past or present infection with non-SARS-CoV-2 coronavirus strains, such as coronavirus HKU1, NL63, OC43, or 229E. COVID-19 IgG, Qualitative by CIA. Assay performed on the Architect i system. This test should not be used for screening of donated blood. The test is developed and validated by Mako Medical (CUA#34D2141858).
